

Assignment-1

```
In [24]: import csv

# open the file
f = open('Assignment 1.csv', 'r')
r = csv.reader(f)
next(r)
```

```
Out[24]: ['hour ', 'consumption(w)']
```

```
In [25]: c_list = []
```

```
In [26]: for row in r:
          val = float(row[1])
          c_list.append(val)
```

```
In [20]: f.close()
```

```
In [27]: # calculations
total_c = sum(c_list)
avg_c = total_c / len(c_list)
max_c = max(c_list)
min_c = min(c_list)
```

```
In [28]: # convert to kWh
c_kwh = [x / 1000 for x in c_list]
```

```
In [29]: # print results
print("Total:", total_c)
print("Average:", avg_c)
print("Max:", max_c)
print("Min:", min_c)
print("First 10 kWh values:", c_kwh[:10])
```

Total: 5300.0

Average: 530.0

Max: 800.0

Min: 200.0

First 10 kWh values: [0.2, 0.3, 0.5, 0.7, 0.6, 0.4, 0.8, 0.7, 0.6, 0.5]
